Oiwa, Toyohashi, 441-3147 Japan

<sup>2)</sup> Kenting National Park Administration Office, 94644 No. 596,  
Kenting Road, Hengchun Township, Pingtung County, Taiwan

*Euryclytosemia nomurai* HAYASHI, 1963 has been known to occur in two isolated islands, Yonaguni Island of the southern Ryukyus and Lan Hsu Island off southeastern Taiwan (HAYASHI, 1963, 1974; CHOU, 2008). In a recent field survey, CHUNG found this species from Pingtung County of the mainland of Taiwan as recorded below.

We would like to thank Dr. Chi-Feng LEE of Taiwan Agricultural Research Institute, Taiwan, and Dr. Tatsuya NIISATO of Bioindicator Co., Ltd., Tokyo, for their kind help in preparing this short report.

*Euryclytosemia nomurai* HAYASHI, 1963

*Euryclytosemia nomurai* HAYASHI, 1963, Ent. Rev. Japan, **16**, p. 15, pl. 2, fig. 10; type locality: Sonae [sic], Yonaguni Is., Southern Ryukyus, Japan. — HAYASHI, 1974, Ent. Rev. Japan, **27**, p. 52; locality record: Lan Hsu Island, off Southeastern Coast of Taiwan.

*Specimens examined.* 1 ♂, Sheding Nature Park, Pingtung County, Taiwan, 12-III-2008, Y.-T. CHUNG leg.; 1 ♂, Siangjiaowan Coastal Forest, Pingtung County, 12-III-2008, Y.-T. CHUNG leg.

*Note.* This species shows a weak geographical variation. In the structure of median lobe of male genitalia, the specimens from Yonaguni Island of the southern Ryukyu are slightly shorter in length than those of other localities and weakly swollen ventrad near middle in lateral view. The specimens from Lan Hsu Island have somewhat distinct dark elytral maculation, but its male genitalia show no difference from that of the mainland of Taiwan.
